

# Business Broadband Connection Voucher Scheme Case Study

## D & G Autocare

Glenearn Road, Perth

[www.dandgautocare.co.uk](http://www.dandgautocare.co.uk)

D & G Autocare has 13 garages across Scotland offering deals in tyres and car repairs where customers can drop into the garage or use online booking facilities so it was important they had fast, reliable broadband. As part of an expansion to the business, in March 2015, D & G Autocare moved premises to a larger unit next door at Glenearn Road in Perth which had no phones, broadband or other services.

D& G Autocare applied to the Broadband Connection Voucher Scheme following the bespoke application process.

*Peter says " If you get the right technical people involved, you can get much more than the basic service. The grant enabled the company to get superfast broadband into the premises and provide opportunities to review our telecommunication services.*

As investment of approximately £60,000 was being made, so it was important to keep costs down at every opportunity, therefore the grant towards broadband was too good an opportunity to miss.

*It gave D&G Autocare an ideal opportunity to save on some costs and invest in new technology. On the back of this decision, as well as getting superfast broadband, we decided to go for a voice over internet telephone protocol system.*

*We now have one superfast broadband line that can do all our telecommunications rather than have many different phone lines. We have benefitted not only financially from the cost of installation, but also have an innovative telephone communication system covering both internet and telephone.*

**Supplier:** 9 Dots Consulting Ltd / Two Circles Communication

**Voucher amount:** £344
